

## We Transform Innovation Into Business

iq! is a management consulting and implementation partner for digital marketing, digital commerce, as well as internet of things

We translate digital innovation into successful, customer-centric business models. We develop these digitalization potentials for major enterprises through innovative strategies, creations, processes and products. Our focus topics are internet of things, e-commerce, digital retail, CRM and loyalty.

For our team based in **Munich** we are looking for a

### Working student (m/f) Unity app development

#### What awaits you:

- A demanding, exciting and diversified occupation in internal and external projects
- Supporting the development of apps and prototypes for virtual reality applications
- Flexible timing and great opportunities for further development in a challenging and cooperative environment, as well as assumption of responsibility for the development of VR solutions
- Collaboration with experienced team members and other working students
- Support of labs team in day-to-day business

#### Which skills are required:

- An above-average bachelor degree with IT background or similar studies
- Experience with programming apps in Unity
- Autonomous, structured and solution oriented approach
- Ability to work in a team, social skills and humour
- Very good command of English and German
